If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Publication Stage :

(A) United States patent

Abstract :

A medical implant with an external surface layer of silicone elastomer
and having an open-cell structure is made by applying solid particles to
the external surface layer of the implant before it is cured, curing
the external surface layer with the solid particles embedded therein and
then dissolving the solid particles with a solvent that does not
dissolve the silicone elastomer. An implant having such an external
surface layer is expected to help prevent capsular contraction, to help
prevent scar formation, and to help in anchoring the implant within the
body.
